Professional Summary

Full-Stack Developer with 3+ years building responsive, role-based web apps using **React, Next.js, Node.js, Express, MongoDB, and PostgreSQL**. Comfortable across the stack – from schema design and **RESTful APIs to RBAC** and **AI-assisted workflow automation with n8n and the OpenAI API**. Experienced with search/pagination on large datasets, analytics dashboards, and **Agile, sprint-based teams**.

Skills

Languages: JavaScript, TypeScript, HTML, CSS, SQL, jQuery

Frameworks/Libraries: React, Next.js, Node.js, Express, Angular.js, Tailwind CSS, shadcn/ui

Databases: MongoDB, PostgreSQL

Tools & Platforms: Git/GitHub, Prisma ORM, Mongoose, RESTful APIs, n8n (Workflow Automation), Docker, CI/CD pipelines, Postman, Vercel, Render

Education

RCC Institute of Information Technology, Kolkata

B.Tech in Information Technology, CGPA: 9.0/10.0

Aug 2019 – Jul 2023

Experience

Keross Research and Development Center Pvt. Ltd. – Kolkata, India

Software Developer Level-1

Jan 2024 – Present

Autokrator.ai – GRC (Governance, Risk & Compliance) Platform

- Built the Risk & Assessment module end-to-end – risk register, risk tasks, with assessments lifecycle and prior assessments auto-archived on re-creation; added search and pagination for large risk datasets.
- Built an **n8n + OpenAI API workflow** that auto-generates close to 90% of a risk's fields and suggested risk tasks from uploaded framework/control data, cutting manual entry.
- Built the framework-subscription tracking layer consumed across every modules to check which frameworks an account has access to.
- Built a context-scoped "Ask AI" assistant on framework controls and audits, using constrained prompt design so responses stay limited to that control's knowledge, or to GRC topics for audits.
- Implemented role-based access control for the Consultancy account across all the roles, governing section-, data-, and button-level visibility, and auto-scoping Project Lead access to only the frameworks tied to their assigned projects.

Attendance Management System

- Built employee sign-in/out, leave workflows, WFH requests, and admin dashboards in React.
- Optimized MongoDB schemas with indexing and aggregation pipelines, cutting query time by up to 45%.
- Restructured API endpoints and added role-based access with pagination, improving HR workflow efficiency by 25–30%.

Junior Software Engineer

Jul 2023 – Dec 2023

- Built features for the company's in-house **Issue Tracker System** using HTML5, CSS3, JavaScript, and jQuery – used company-wide (including by clients, for resource visibility) to run Agile sprints and backlogs in place of an external tool like Jira.

Projects

DocFinder – Doctor Appointment Booking Platform

Live Demo: docfinder-ten.vercel.app

- Architected a multi-tenant booking platform with two roles – Patients, who search and book doctors by specialty, location, and date, and Centers, who manage one or more doctors, availability, and bookings from a single login (private-chamber or multi-doctor clinic support) – using Next.js, TypeScript, Node.js, Express, PostgreSQL, and Prisma.
- Built date-specific slot management letting Centers mark availability Full/Free in real time, synced live with patient-side search, booking, and cancellation.
- Built a Center analytics dashboard – summary cards, a 7-day bookings/earnings chart, date-range and doctor filters, and a per-doctor earnings breakdown.
- Implemented offline-payment tracking (Paid/Unpaid status set by Centers) with fee snapshotting at booking time, so later price changes don't affect past earnings.
- Deployed on Vercel (frontend) and Render (backend) with **environment-based API config and CORS** locked to production.
