Professional Summary

Full Stack Developer with 3 years of experience designing, building, and shipping scalable web applications end-to-end — from database architecture to polished, responsive interfaces. Proficient in **React**, **Next.js**, **Node.js**, **Express**, **TypeScript**, **MongoDB**, **PostgreSQL**, and **Prisma**, with a strong focus on clean RESTful API design and maintainable, well-structured code. Experienced in building role-based, permission-driven platforms and crafting responsive UIs using **Tailwind CSS** and **shadcn/ui**. Beyond core development, I've worked on integrating **AI-powered workflow automation** using **n8n** and the **OpenAI API** to reduce manual effort and streamline processes — and I enjoy independently architecting full products, having built a multi-tenant booking platform from schema design through deployment. Looking to bring this end-to-end ownership mindset to a team solving real-world problems at scale.

Experience

Software Developer Level-1

Keross Research and Development Center Pvt. Ltd.

Kolkata, India

Jan 2024 – Present

Project: Autokrator.ai – GRC (Governance, Risk & Compliance) Platform.

- **Technology Used** : Next.js, TypeScript, Node.js, Express, MongoDB, PostgreSQL, Prisma, n8n, Tailwind CSS, shadcn/ui
- Worked as a Full Stack Developer on a compliance-first GRC platform supporting ISO 27001, SOC 2, and PCI DSS frameworks; built risk management dashboards covering risk assessments, risks, and risk tasks.
- Designed an **n8n + OpenAI API** workflow that auto-fills risk fields and suggests relevant tasks, cutting manual data-entry time.
- Applied **role-based access control (RBAC)** across the platform, conditionally rendering UI and filtering data per user role on framework subscription and audit creation modules.

Software Engineer Trainee

Keross Research and Development Center Pvt. Ltd.

Kolkata, India

Jul 2023 – Dec 2023

- **Technology Used:** HTML5, CSS3, Javascript, JQuery, IKON (in-house platform)
- Worked on company's Issue Tracker Process, which works as a replacement of Jira tool.

Education

RCC Institute of Information Technology, Kolkata

B.Tech in Information Technology

August 2019 – July 2023

CGPA: 9.10/10.0

Personal Projects

DocFinder – Doctor Appointment Booking Platform

[Live Demo](#) 

- **Technology Used** : Next.js, TypeScript, Node.js, Express, PostgreSQL, Prisma, shadcn/ui
- **Deployed on Vercel (frontend) and Render (backend)**, with environment-based API configuration and CORS locked to the production domain.
- Architected a multi-tenant booking platform with **Patient** and **Center** roles, where a single Center login can manage **multiple doctors** under one account (private-chamber or multi-doctor clinic support).
- Built date-specific slot management letting Centers mark individual availability slots Full/Free in real time.
- Enabled patients to search doctors by name, specialty, location, and date, with booking/cancellation synced live to Center-side availability.
- Implemented an offline-payment tracking system (Paid/Unpaid status set by Centers, reflected instantly on the patient side) and a Center earnings dashboard for monthly, yearly, and doctor-wise revenue tracking.

Technologies

Languages: JavaScript, TypeScript, HTML, CSS, SQL, jQuery

Frameworks/Libraries: React, Next.js, Node.js, Express, Tailwind CSS, shadcn/ui

Databases: MongoDB, PostgreSQL

Tools & Others: Git/GitHub, Prisma ORM, RESTful APIs, n8n (Workflow Automation), Docker, Postman, Vercel, Render
